

Jia-Long Lin

(886) 929-054-136 • linganinja.0120@gmail.com • [@noidilin](https://go.noidilin.dev/blog)

Basics

- Full-cycle cloud/web engineer with frontend roots, AWS SAA certification, and hands-on AWS EKS, Terraform, Kubernetes, GitOps, CI/CD, and observability project experience
- Builds product-facing features while expanding ownership into cloud-native deployment, service boundaries, container workflows, testing, release automation, and operational visibility
- Comfortable with Linux CLI, container networking, Kubernetes networking basics, AWS architecture fundamentals, and web development/debug/test workflows
- Uses AI-assisted engineering workflows responsibly for planning, implementation, testing, debugging, documentation, and review preparation while preserving human ownership of final decisions

Skills

Cloud & Infrastructure: Advanced **Keywords:** AWS, AWS EKS, AWS ECS, Terraform, Kubernetes, Docker, GitHub Actions, Argo CD, Kustomize, Container networking, Kubernetes networking basics

Software Engineering: Advanced **Keywords:** TypeScript, Node.js, React, Next.js, Python scripting, REST APIs, Vitest, React Testing Library, Playwright

Observability & Operations: Intermediate **Keywords:** Prometheus, Grafana, AWS CloudWatch, CloudWatch Logs, GitOps, CI/CD, Linux basics, Deployment troubleshooting

AI-Native Engineering: Advanced **Keywords:** AI-assisted development, Context engineering, Agent workflows, AI PR review, GitHub Actions agentic workflows, Amazon Bedrock Knowledge Base, RAG

Certificates

AWS Certified Solutions Architect –Associate

Amazon Web Services

2026

Work

Alion Tech

Front-End Engineer

Oct 2025–Present

- Contributed to modernization of Japanese B2B products by improving admin and customer-facing experiences with Next.js, React, TypeScript, and reusable implementation standards
- Standardized frontend patterns across 4 customer-facing journeys —auth, payment, invoice, and document —backed by Fallow CLI duplication checks with a 5% maximum threshold
- Supported deployment planning and environment strategy discussions across AWS Amplify and EC2-based workflows, connecting product implementation with practical release constraints
- Built typed API data flows, resilient loading/error states, and reviewable frontend architecture for operations-heavy admin and customer workflows
- Used AI-assisted development practices for implementation planning, debugging hypotheses, documentation, and review preparation while keeping final integration decisions human-owned

Keywords: Next.js, React, TypeScript, Node.js, Tailwind CSS, shadcn/ui, Storybook, TanStack Query, Zustand, AWS Amplify

Freelance Motion Designer

<https://go.noidilin.dev/design>

Real-time 3D & AI Workflow Designer

Oct 2020–Present

- Delivered real-time 3D and motion projects while building AI-assisted rendering workflows using upscaling, denoising, and optical-flow frame interpolation to reduce iteration time by up to 85%

Keywords: Unreal Engine 5, Blender, Omniverse, AI-assisted Rendering, Workflow Automation

Projects

Hiraya E-commerce

<https://lazyhiraya.noidilin.dev>

Public cloud-native AWS EKS demonstration platform and recruiter-facing project site

Jun 2026–Present

- Built a 5-service cloud-native demonstration platform to exercise service boundaries, API contracts, Dockerized services, CI/CD, GitOps delivery, and observability on AWS EKS
- Automated AWS EKS platform deploy/destroy workflows with Terraform, GitHub Actions, ECR image promotion, Argo CD, and Kustomize for reproducible rebuilds
- Implemented observability foundations with Prometheus, Grafana to support service diagnosis and operational visibility
- Added AI PR code review and a GitHub Actions agentic documentation workflow so implementation changes can trigger reviewable updates to source documents used by the project knowledge base
- Built a recruiter-facing static site with diagrams, interactions, public repo links, and a RAG chatbot powered by Amazon Bedrock Knowledge Base to explain the architecture and decisions

Keywords: AWS EKS, Terraform, Kubernetes, Docker, Argo CD, GitHub Actions, Kustomize, Prometheus, Grafana, Cloud-Watch, Amazon Bedrock Knowledge Base

pi-noid AI-Native Workflow Extensions

<https://github.com/noidilin/pi-noid>

Public TypeScript monorepo for personal AI-agent workflow extensions

Apr 2026–Present

- Built custom pi extensions for loop-based AI-agent workflows, herdr orchestration, and skill management, turning daily development practices into reusable TypeScript tooling
- Applied explicit context management, CLI/MCP/tool-routing decisions, and human review gates to keep AI-assisted implementation, testing, debugging, and documentation workflows reliable

Keywords: TypeScript, AI agents, Context engineering, Loop engineering, CLI tooling, MCP

Misegoto

<https://misegoto.jp>

Japanese B2B platform connecting stores and repairers through trusted workflows

Jan 2026–Present

- Rebuilt a Japanese B2B admin dashboard with Next.js 16 and React 19 using localized routing, responsive layouts, and reusable UI primitives
- Implemented advanced table workflows with filtering, export, batch actions, permission-aware interactions, and typed API handling for operations-heavy use cases
- Delivered transaction-facing payment, receipt, and document flows while keeping frontend state and API integration predictable for review and maintenance

Keywords: Next.js, TypeScript, React, TanStack Query, Zustand, REST APIs, B2B SaaS

Education

National Taiwan University

<https://management.ntu.edu.tw/en/Fin>

Bachelor, Finance

Sep 2014–Jun 2019

Languages

English: Full Professional Proficiency

Keywords: TOEIC 985
