

Jia-Long Lin

(886) 929-054-136 • linganinja.0120@gmail.com • [@noidilin](https://go.noidilin.dev/blog)

Basics

- Frontend engineer with a finance background and strong foundations in analytical thinking, systems reasoning, and project delivery
- Built user-facing products and internal tools with modern React-based stacks, focusing on maintainable architecture, reliable UX, and scalable frontend workflows
- Develops maintainable interfaces with strong attention to type safety, localization, responsive behavior, and reliable UX
- Brings cross-disciplinary experience in design, motion, and real-time 3D production to create polished interfaces with strong visual clarity

Work

Alion Tech

Contract Front-End Engineer

Oct 2025–Present

- Contributed to the modernization of Japanese B2B products by improving both admin and customer-facing experiences
- Helped the team move faster by creating reusable patterns, clearer implementation standards, and easier-to-review UI work
- Guided deployment planning by comparing cost-conscious environment strategies and aligning the final approach with team familiarity and project needs
- Improved customer-facing reliability across account, payment, support, password reset, receipt, and document-generation journeys

Keywords: Next.js, React, TypeScript, Tailwind CSS, shadcn/ui, Storybook, TanStack Query, Zustand, Firebase, next-intl, Axios, Snapdom

Freelance Motion Designer

<https://go.noidilin.dev/design>

Real-time 3D & Motion Designer (Unreal/Blender) / Colorist

Oct 2020–Present

- Delivered freelance real-time 3D, motion, and color work in parallel with product-focused frontend development
- Built real-time 3D scenes and interactive environments with Blender and Unreal Engine for 15+ freelance projects
- Developed repeatable asset and rendering pipelines with procedural modeling, shader nodes, and automation to improve production efficiency
- Applied lighting, color management, and visual-system thinking to produce polished client-facing outputs

Keywords: Unreal Engine 5, Blender, Omniverse, Real-time Rendering, Procedural Modeling, ACES / Color Management, BIM & IFC Industry Open Standard, DaVinci Resolve Color Grading

Education

National Taiwan University

<https://management.ntu.edu.tw/en/Fin>

Bachelor, Finance

Sep 2014–Jun 2019

- Applied Python to automate analysis workflows across business, supply chain, and finance use cases
- Conducted financial modeling and risk analysis using real company data for decision-oriented reporting
- Built a foundation in analytical thinking, structured problem solving, and data-backed communication

Skills

Front-end: Advanced **Keywords:** TypeScript, React, Next.js, shadcn/ui, TanStack Query, Zustand, Zod

DevOps: Advanced **Keywords:** AWS, Docker, Terraform, GitOps, Kubernetes, Prometheus, Grafana, Argo CD, GitHub Actions

Creative Technology: Expert **Keywords:** Three.js, Blender, Unreal Engine 5, Omniverse

Projects

Hiraya E-commerce <https://hiraya.noidilin.dev>

A cloud-native e-commerce platform built on AWS EKS Jun 2026–Present

- Designed a cloud-native e-commerce app on AWS EKS, separating Project Bootstrap, Platform Core, Cluster Bootstrap, and GitOps ownership for reproducible rebuilds
- Built a Dockerized React, Node.js, and PostgreSQL microservices storefront with gateway, auth, catalog, order, and user services behind contract-tested API boundaries
- Automated delivery with GitHub Actions, ECR image promotion, Argo CD app-of-apps, and Kustomize manifests to move service releases through Git-owned desired state
- Implemented observability foundations with Prometheus, Grafana, and CloudWatch log forwarding for SRE diagnosis decision making

Keywords: AWS EKS, Terraform, Kubernetes, Argo CD, GitHub Actions, Docker, Prometheus, Grafana, AWS CloudWatch

Misegoto <https://misegoto.jp>

A Japanese B2B platform connecting stores and repairers through trusted workflows Jan 2026–Present

- Rebuilt a Japanese B2B admin dashboard with Next.js 16 and React 19 using localized routing, responsive layouts, and reusable UI primitives
- Implemented advanced table workflows with filtering, export, batch actions, and permission-aware interactions for operations-heavy use cases
- Built receipt and document generation flows, including browser-side PDF export and payment-related UI for customer-facing journeys
- Integrated Firebase-backed real-time messaging and typed API data flows to keep operational tooling responsive and predictable

Keywords: Next.js, TypeScript, shadcn/ui, Storybook, Mantine, TanStack Query, Zustand, Firebase, Localization, B2B SaaS

eye チェック <https://eyecheck-bloodcell.com>

A blood-cell recognition exam platform with reporting and personalized practice Oct 2025–Present

- Built a Japanese Next.js and React assessment platform covering registration, test-taking, and reporting flows
- Implemented OTP verification and session handling for paid user journeys and admin access control
- Developed token-driven test interactions with resilient loading/error states and Zustand-based state management
- Built reporting views with deep-linked pagination and PDF export via react-pdf, including CJK font support and deterministic filenames

Keywords: Next.js, TypeScript, shadcn/ui, Zustand, React Hook Form, Zod, Axios, Sentry, react-pdf

Languages

English: Full Professional Proficiency **Keywords:** TOEIC 985

Chinese: Native or Bilingual Proficiency

Interests

OS Ricing: Arch Linux (BTW), Omarchy, DevTools, Neovim, Personal Theming Systems
